--	---	--	---

## 1.0 EVALUATION SCOPE

### Compliance with the following code:

2018 and 2015 [International Building Code® \(IBC\)](#)

For evaluation for compliance with codes adopted by Los Angeles Department of Building and Safety (LADBS), see [ESR-2012 LABC Supplement](#).

For evaluation of compliance with codes adopted by the California Office of Statewide Health Planning and Development (OSHPD) and Division of State Architects (DSA), see the [ESR-2012 CBC Supplement](#).

### Property evaluated:

Structural

## 2.0 USES

CEMCO Slotted Tracks are deflection tracks that are recognized for use in nonload-bearing, light-gage steel framed wall assemblies. CEMCO Slotted Tracks are part of the Expansion Joint System, which provides a gap at the top of the wall to accommodate vertical movement of the building caused by seismic, wind or other loads.

## 3.0 DESCRIPTION

### 3.1 General:

The CEMCO slotted Tracks are available with drift slots in the web (CST-W) and without drift slots in the web (CST, CST-300, and CST-325).

### 3.2 CST and CST-W Tracks:

The CST deflection tracks are U-shaped channel sections with slotted flanges and are formed from cold-formed sheet steel. The CST sections have widths of 2<sup>1</sup>/<sub>2</sub>, 3<sup>5</sup>/<sub>8</sub>, 4, 6, and 8 inches (64, 92, 102, 152 and 203 mm) and are cold-formed from steel having design thicknesses of 0.0188, 0.0312, 0.0346, 0.0451, 0.0566, and 0.0713 inch [0.48, 0.79, 0.88, 1.15, 1.44, and 1.81 mm (18, 30, 33, 43, 54, and 68 mils)]. The track legs (flanges) are 2<sup>1</sup>/<sub>2</sub> inches (63.5 mm) in length and have 1/4-inch-wide-by-1<sup>1</sup>/<sub>2</sub>-inch-long (6.4 mm by 38 mm) vertical slots spaced 1 inch (25.4 mm) on center along the length of the section.

The CST-W deflection tracks are the same as the CST deflection tracks, except they have drift slots 2½ inches (64 mm) long spaced 4 inches (102 mm) on center staggered on either side of the centerline of the web. Six-inch-drift (152 mm) slots are available at special request for track widths of 3<sup>5</sup>/<sub>8</sub>, 4, 6 and 8 inches (92, 102, 152 and 203 mm).

[Figure 1](#) provides details of the CST and CST-W sections. The CST and CST-W section designations are shown in [Table 2](#).

The allowable lateral load for the CST track is shown in [Table 3](#). The allowable lateral load for the CST-W track is shown in [Table 4](#).

The 54 and 68 mil deflection tracks are formed from steel complying with ASTM A1003 ST50H or ASTM A653 SS, Grade 50, Class 1. The 18, 30, 33 and 43 mil deflection tracks are formed from steel complying with ASTM A653 SS, Grade 33. The 18, 30, and 33 mil steel sections have a G40 or greater galvanized coating, while 43, 54, and 68 mil steel sections have G60 or greater galvanized coatings.

### 3.3 CST-300 and CST-325 Tracks:

The CST-300 deflection tracks are U-shaped channel sections with slotted flanges and are formed from cold-formed sheet steel. The CST-300 sections have widths of 3<sup>5</sup>/<sub>8</sub>, 4, 6, and 8 inches (92, 102, 152 and 203 mm) and are cold-formed from steel having design thicknesses of 0.0346, 0.0451, 0.0566, and 0.0713 inch [0.88, 1.15, 1.44, and 1.81 mm (33, 43, 54, and 68 mils)]. The track legs (flanges) are 3 inches (76.2 mm) in length and have ¼-inch-wide-by-2-inch-long (6.4 mm by 50.8 mm) vertical slots spaced 1 inch (25.4 mm) on center along the length of the section. The spacing from the top of the vertical slot to the web and the bottom of the slot to the end of the flange are both ½-inch (12.7 mm).

The CST-325 deflection tracks are the same as the CST-300 deflection tracks, except they have different flange dimensions. The CST-325 sections have widths of 3<sup>5</sup>/<sub>8</sub>, 4, 6 and 8 inches (92, 102, 152 and 203 mm). The track legs (flanges) are 3-¼ inches (82.55 mm) in length and have ¼-inch-wide-by-2-inch-long (6.4 mm by 50.8 mm) vertical slots spaced 1 inch (25.4 mm) on center along the length of the section. The spacing from the top of the vertical slot to the web is 1 inch (25.4 mm) and the bottom of the slot to the end of the flange ¼ inch (6.35 mm).

[Figure 2](#) and [Figure 3](#) provide details of the CST-300 and CST-325 sections, respectively. The CST-300 and CST-325 section designations are shown in [Table 2](#).

The allowable lateral load for the CST-300 track is shown in [Table 5](#). The allowable lateral load for the CST-325 track is shown in [Table 6](#).

The 54 and 68 mil deflection tracks are formed from steel complying with ASTM A1003 ST50H or ASTM A653 SS, Grade 50, Class 1. The 33 and 43 mil deflection tracks are formed from steel complying with ASTM A653 SS, Grade 33. The 33-mil steel section has a G40 or greater galvanized coating. The 43, 54, and 68 mil steel sections have G60 or greater galvanized coatings.

### 3.4 Fasteners:

Fasteners used to attach the tops of the studs to the CST, CST-300, CST-325, or CST-W tracks must be minimum No. 8 by 9/16-inch-long (14.3 mm), wafer-head, self-piercing tapping or self-drilling tapping, as applicable, steel screws complying with ASTM C1513-13.

## 4.0 DESIGN AND INSTALLATION

The attachment of the CST, CST-300, CST-325, or CST-W tracks to the studs is accomplished by using fasteners described in Section 3.4. The screws must be installed into each side of the CST, CST-300, CST-325, or CST-W through the center of the slots designed for upward and downward movement, without affecting the positive attachment of the stud framing members. The fasteners must penetrate the stud section a minimum of three threads. There must be no attachment through the slotted track that will impair movement.

## 5.0 CONDITIONS OF USE:

The CEMCO CST, CST-300, CST-325, and CST-W expansion joint systems described in this report comply with, or are suitable alternatives to what is specified in, the codes noted in Section 1.0 of this report, subject to the following conditions:

- 5.1 The CST, CST-300, CST-325, and CST-W must be installed and identified in accordance with this report, the applicable code and the report holder's or additional listee's published installation instructions. In the event

of a conflict between this report and the report holder's or additional listee's published installation instructions, this report governs.

- 5.2 Complete plans, details and calculations for each project, verifying compliance with this report, must be submitted to the code official for approval. The calculations must be prepared by a registered design professional where required by the statutes of the jurisdiction in which the project is to be constructed.
- 5.3 The minimum uncoated steel thickness of cold-formed members, as delivered to the jobsite, must be at least 95 percent of the design base-metal thickness as specified in this report. The design of the steel studs to be used in the expansion joint systems is outside the scope of this report and must be submitted to the code official for approval.
- 5.4 Products are manufactured by the companies and locations noted in [Table 1](#) under a quality control program with inspections by ICC-ES.

## 6.0 EVIDENCE SUBMITTED

- 6.1 Data in accordance with the [ICC-ES Acceptance Criteria for Cold-Formed Steel Framing Members \(AC46\)](#), dated October 2019.

## 7.0 IDENTIFICATION

- 7.1 Each CST, CST-300, CST-325, and CST-W track is identified with the manufacturer's initials (CEMCO), "CST", "CST-300", "CST-325", or "CST-W", respectively, the minimum base steel thickness, the minimum yield strength (if over 33 ksi), the galvanization coating designation (if G60 or greater), the designation "NS" (if G40 is used), and the evaluation report number (ICC-ES ESR-2012). In addition, each pallet of track is identified with the report holder's company name and the section designation.
- 7.2 The report holder's contact information is the following:

18	0.0188	0.0179	33	G40	2 <sup>1</sup> / <sub>2</sub> 3 <sup>5</sup> / <sub>8</sub> 4 6 8	5/8	80	20
30	0.0312	0.0296	33	G40	2 <sup>1</sup> / <sub>2</sub> 3 <sup>5</sup> / <sub>8</sub> 4 6 8	5/8	135	45
33	0.0346	0.0329	33	G40	2 <sup>1</sup> / <sub>2</sub> 3 <sup>5</sup> / <sub>8</sub> 4 6 8	5/8	150	40
43	0.0451	0.0428	33	G60	2 <sup>1</sup> / <sub>2</sub> 3 <sup>5</sup> / <sub>8</sub> 4 6 8	5/8	220	65
54	0.0566	0.0538	50	G60	2 <sup>1</sup> / <sub>2</sub> 3 <sup>5</sup> / <sub>8</sub> 4 6 8	5/8	355	125
68	0.0713	0.0677	50	G60	3 <sup>5</sup> / <sub>8</sub> 4 6 8	5/8	380	200

For SI: 1 inch = 25.4mm, 1 lbf = 4.448 N, 1 ksi = 6.8948 kPa, 1 lb/ft = 14.5939 N/m

<sup>1</sup>See the last two digits in the section designation in [Table 2](#).

<sup>2</sup>The gap is the maximum distance between end of the stud and the web of the track. The gap is equal to the length of the slot in the track's flange divided by 2 minus the radius of the fastener connecting the stud to the track flange through the slot [(1.5/2) - 1/8 = 5/8 inches].

<sup>3</sup>Loads are allowable strength loads (ASD). For load and resistance factor design (LRFD) multiply by 1.54.

<sup>4</sup>Deflection is the deflection of the edge of the flange away from the web of the CST.

TABLE 4—CST-W SLOTTED TRACK ALLOWABLE LOADS

**EVALUATION SUBJECT:**

CEMCO STEEL TRACKS EXPANSION JOINT SYSTEM FOR NONLOAD-BEARING WALL SYSTEMS

**1.0 REPORT PURPOSE AND SCOPE****Purpose:**

The purpose of this evaluation report supplement is to indicate that CEMCO Steel Tracks Expansion Joint System for Nonload-Bearing Wall Systems, described in ICC-ES evaluation report [ESR-2012](#), have also been evaluated for compliance with the code noted below as adopted by the Los Angeles Department of Building and Safety (LADBS).

**Applicable code edition:**2020 *City of Los Angeles Building Code* (LABC)**2.0 CONCLUSIONS**

The CEMCO Steel Tracks Expansion Joint System for Nonload-Bearing Wall Systems, described in Sections 2.0 through 7.0 of the evaluation report [ESR-2012](#), comply with the LABC Chapters 7 and 22, and are subject to the conditions of use described in this supplement.

**3.0 CONDITIONS OF USE**

The CEMCO Steel Tracks Expansion Joint System for Nonload-Bearing Wall Systems described in this evaluation report supplement must comply with all of the following conditions:

- All applicable sections in the evaluation report [ESR-2012](#).
- The design, installation, conditions of use and identification of the Cold-Formed Steel Framing Members are in accordance with the 2018 *International Building Code*® (2018 IBC) provisions noted in the evaluation report [ESR-2012](#).
- The design, installation and inspection are in accordance with additional requirements of LABC Chapters 7, 16, 17 and 22, as applicable.

This supplement expires concurrently with the evaluation report, reissued October 2023.

**REPORT HOLDER:**

CALIFORNIA EXPANDED METAL PRODUCTS COMPANY

**EVALUATION SUBJECT:**

CEMCO STEEL TRACKS EXPANSION JOINT SYSTEM FOR NONLOAD-BEARING WALL SYSTEMS

**1.0 REPORT PURPOSE AND SCOPE****Purpose:**

The purpose of this evaluation report supplement is to indicate that the CEMCO Steel Tracks Expansion Joint System for Nonload-Bearing Wall Systems, described in ICC-ES evaluation report ESR-2012, has also been evaluated for compliance with the code noted below.

**Applicable code edition:**2019 *California Building Code* (CBC)

For evaluation of applicable chapters adopted by the California Office of Statewide Health Planning and Development (OSHPD) AKA: California Department of Health Care Access and Information (HCAI) and the Division of State Architect (DSA), see Sections 2.1 and 2.2 below.

**2.0 CONCLUSIONS**

The CEMCO Steel Tracks Expansion Joint System for Nonload-Bearing Wall Systems, described in Sections 2.0 through 7.0 of the evaluation report ESR-2012, complies with CBC Chapters 7 and 22, provided the design and installation are in accordance with the 2018 *International Building Code*® (IBC) provisions noted in the evaluation report and the additional requirements of CBC Chapters 7, 16 and 17, as applicable.

**2.1 OSHPD:**

The CEMCO Steel Tracks Expansion Joint System for Nonload-Bearing Wall Systems, described in Sections 2.0 through 7.0 of the evaluation report ESR-2012, comply with CBC Chapter 7, amended Sections in Chapters 16, 17 and 22, and Chapters 16A, 17A and 22A provided the design and installation are in accordance with the 2018 *International Building Code*® (IBC) provisions noted in the evaluation report and the additional requirements in Sections 2.1.1 and 2.1.2 of this supplement:

**2.1.1 Conditions of Use:**

1. All loads applied to the cold-formed steel studs shall be determined by the registered design professional and shall comply with applicable loads from CBC amended sections in Chapters 16 and 16A.
2. Prescriptive framing is not permitted in accordance with CBC Section 2211A.1.2 [OSHPD 1 & 4].
3. In accordance with CBC Section 2210.2, cold formed steel structures shall be designed and detailed in accordance with the requirements of AISI S100.
4. In accordance with CBC Section 2211.2 and 2211A.2, for cold-formed steel light-frame construction, the design and installation of nonstructural members and connections shall be in accordance with AISI S220 for noncomposite assembly design. Where nonstructural members do not qualify for design under AISI 220, the design and installation of nonstructural members and connectors shall be in accordance with AISI S240 or S100 [OSHPD 1, 1R, 2, 4 and 5].

**2.1.2 Special Inspection Requirements:**

1. In accordance with CBC Section 1704.2 Exception 3, special inspection is required for portions of structures designed and constructed in accordance with the cold-formed steel light-frame construction provisions of CBC 2211.1.2 [OSHPD 1R, 2, & 5].
2. Periodic special inspections shall be required in accordance with CBC Section 1705A.12.3 and 1705A.12.5 [OSHPD 1 & 4].

**2.2 DSA:**

The CEMCO Steel Tracks Expansion Joint System for Nonload-Bearing Wall Systems, described in Sections 2.0 through 7.0 of the evaluation report ESR-2012, comply with CBC Chapter 7, and amended Sections in Chapters 16, 17 and 22, and Chapters 16A, 17A and 22A, provided the design and installation are in accordance with the 2018 *International Building Code*<sup>®</sup> (IBC) provisions noted in the evaluation report and the additional requirements in Sections 2.2.1 and 2.2.2 of this supplement.

**2.2.1 Conditions of Use:**

1. All loads applied to the cold-formed steel studs shall be determined by the registered design professional and shall comply with applicable loads from CBC amended sections in Chapters 16 and 16A.
2. Prescriptive framing is not permitted in accordance with CBC Section 2211A.1.2 [DSA-SS].
3. In accordance with CBC Section 2211A.2, for cold-formed steel light-frame construction, the design and installation of nonstructural members and connections shall be in accordance with AISI S220 for noncomposite assembly design. Where nonstructural members do not qualify for design under AISI 220, the design and installation of nonstructural members and connectors shall be in accordance with AISI S240 or S100 [DSA-SS].

**2.2.2 Special Inspection Requirements:** Periodic special inspections shall be required in accordance with CBC Section 1705A.12.3 and 1705A.12.5 [DSA-SS/CC].

This supplement expires concurrently with the evaluation report, reissued October 2023.
